

Junior systems developer (Umeå)

Join our growing team of software developers and help us make our product even better. Tasks consist of development, programming and testing – working both independently as well as in smaller teams.

This means, among other things, design, architecture, programming and otherwise contributing to various development projects.

With a set goal of delivering the best possible support

every full-time employee at Intinor is a part of our support line. This also helps our employees to get a deeper understanding of the problems our customers might face.

Who are you?

We believe that you hold a degree in Computer Science, Civil Engineering or other broad education in programming and development.

As part of our team, you will work on a wide variety of tasks. Therefore, the successful candidate will have a natural curiosity combined with an eagerness to learn new technologies and to familiarize yourself with new contexts.

It would be advantageous, but not essential for you to have some experience or interest in our key business areas - system programming in C / C ++ / rust, Linux, UX/UI/MDI, networks, security, cloud and video/audio.

We offer:

- Opportunity to work remote and flexible working hours.
- Market salary and collective agreement (kollektivavtal)
- Weekly wellness hour (Friskvårdstimme)
- Wellness contribution (Friskvårdsbidrag)
- An exciting and challenging job in a growing company and industry
- "Friday-fun", pick your own passion project!

Application: Send CV and personal letter to Björn (bjorn.weinehall@intinor.se)

Don't hesitate to reach out if you have any questions.
